BOBER'S

1946 Fair Price CATALOG
of Hardest and Best Yielding
FIELD and GARDEN SEEDS
NEWELL, SOUTH DAKOTA

Plant more ALFALFA and Pasture
Grasses to lay the foundation for
prosperity in the years to come.

OUR PRODUCT IS PROSPERITY

Our son Louis is now back with us after 3½ years as navigator with the Army Air Force.

Our younger son Jack is in the Air Force with the Army of Occupation in the Pacific.

Seed is not an end in itself. It is valuable only for what it produces.

We all agree that there is too much land in row crops for the best farming. With the change in our food production needs and the expected price adjustments, this will be a good time to make the shifts in our land uses and our farming system.

Our new Improved introductions in Seed Grain, Forage plants, Hardier strains of ALFALFA and more productive PASTURE and HAY mixtures are the most profitable investments for you because of their higher disease resistance, drought resistance and longer lived nutritive plants of highest yielding ability.

Livestock and dairy men particularly should capitalize on the important advantages of our hardier, better yielding Alfalfa and Pasture and Hay mixtures as a means toward higher income farming and permanent PROSPERITY.

With best wishes to you and yours in 1946, we remain

Sincerely yours,
Sam H. Bober & Sons

TERMS OF SALE AND SHIPMENT

Payment: Cash in full with order. Money order, bank draft or check on good bank. We ship promptly on receipt of your order. All items are priced f.o.b. Newell except garden seeds, which are prepaid.

Newell is in Butte County, on the northern foothills of the Black Hills, about 3,000 feet above sea level, about 30 miles from Montana line. We ship on the C., N. W. and Milwaukee Railroads and with the Buckingham and Wilson Trucking Companies, and connecting with other lines.

PLEASE ORDER ALL FIELD SEEDS AT ONCE

(1) Help yourself to better yields by ordering these seeds real early for early planting; (2) Help Uncle Sam by shipments in midwinter instead of crowding transportation in the spring; (3) Help us by letting us fill your order for all seeds in midwinter when help is easier to get.

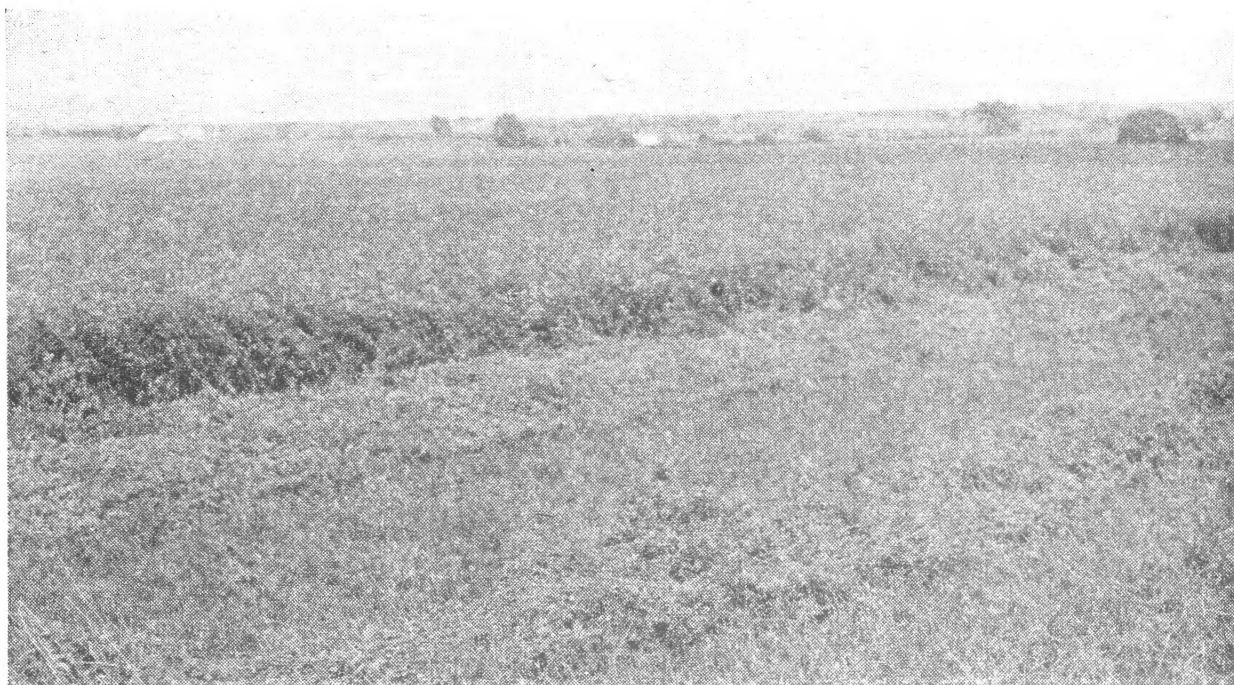

YOUR COOPERATION WILL BE APPRECIATED

BUY EARLY and SAVE MONEY

Ten Reasons Why You Should Plant PROF. HANSEN'S SIBERIAN COSSACK ALFALFA

1. It is the hardiest alfalfa known; 2. A better soil builder than other alfalfa; 3. More drought resistant; 4. Will make a big crop of hay in a dry season when others fail; 5. Has a double root system, both branched and deep; 6. Makes finer quality hay; 7. Will yield more hay per acre no matter what the weather conditions are; 8. Freezing does not kill young plants, neither does it kill or injure the growing hay; 9. Requires less seed per acre than other varieties; 10. Hogs do not kill it out for pastures, as they do other strains. **COSSACK, the World's Finest Alfalfa.** Means more hay and a longer lasting stand. Purity 99.3 per cent, 90 per cent or more live seed. Dollar for dollar your best alfalfa buy.

10 lbs. \$5.40; 30 lbs. \$16.15; 60 lbs. \$31.80; 100 lbs. \$52.50

Cossack Alfalfa—Second Cutting—Heaviest Yielding—Grows in Every State in the Union

LADAK ALFALFA IS WILT RESISTANT

Originated in the very high mountainous section of India. It has proved very hardy and drought resistant and it is also wilt resistant. The supply of this seed is very limited. 99.5 per cent purity, 90 per cent or more live seed.

10 lbs. \$6.10; 30 lbs. \$17.75; 60 lbs. \$35.00; 100 lbs. \$58.00

LADAK AND COSSACK ALFALFA MIXED

For sections of country where wilt disease bothers alfalfa we recommend this mixture composed of half Ladak and half Cossack alfalfa for resistance to disease and at the same time high yielding ability of hardy alfalfa. 99.3 per cent purity, 90 per cent or more live seed.

10 lbs. \$5.65; 30 lbs. \$16.65; 60 lbs. \$32.85; 100 lbs. \$54.50

GRIMM-TYPE ALFALFA SEED

Ninety-nine per cent purity, 90 per cent live seed.

30 lbs. \$15.85; 60 lbs. \$31.20; 100 lbs. \$51.50

HARDY DRY LAND ALFALFA SEED

Ninety-nine per cent purity, 90 per cent live seed.

60 lbs. \$30.60; 100 lbs. \$50.50

FARM BELT ALFALFA SEED

A mixture of the above varieties, not as bright or as plump seed.

Ninety-eight per cent purity, 85 per cent live seed.

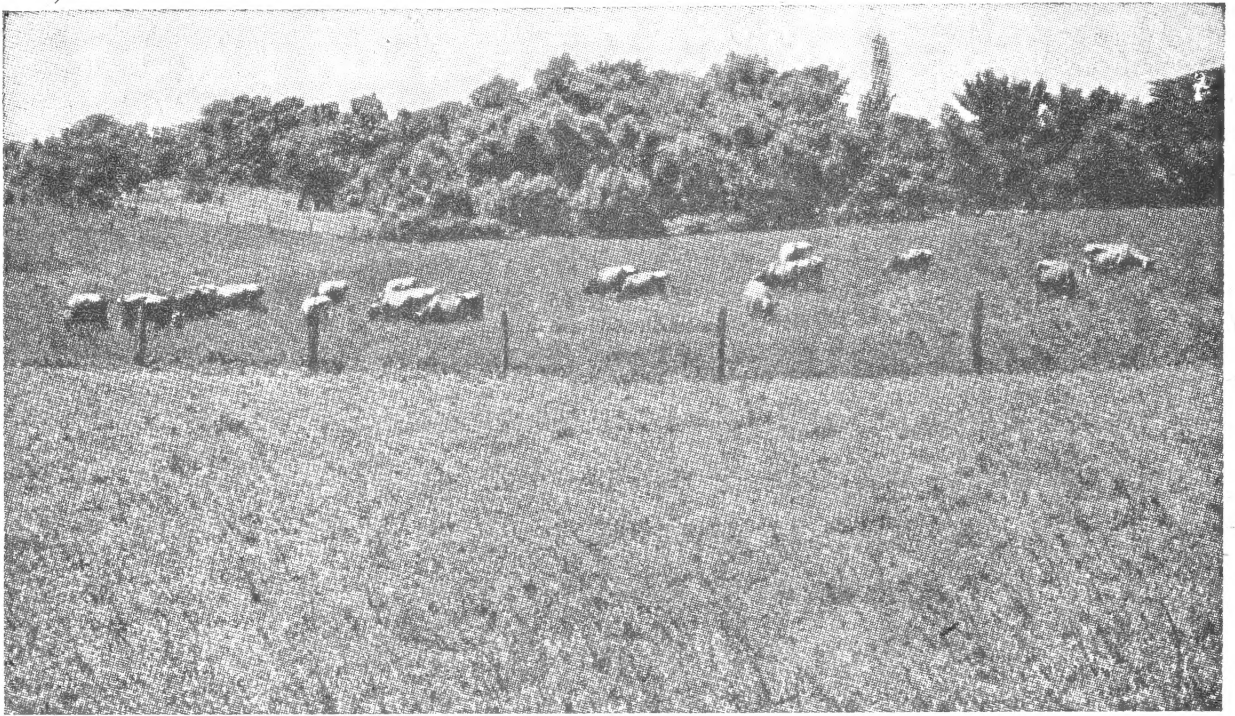

\$48.00 per 100 lbs.

All our seed is free from noxious seed. The above prices include the cost of the bags and cost of inoculating the seed with Legume-Aid inoculation, so it will be ready to plant and get a good start for you. The inoculation is good for 6 months from time of treatment.

Because of grasshopper damage and unfavorable weather, the 1945 Alfalfa Seed crop is again very short. We advise that you order your seed immediately. There may not be enough later on to go around.

ALL SEASON PERMANENT PASTURE AND HAY MIXTURE

The Pasture With the High Protein Content

All Season Permanent Pasture is well adapted to alternate grazing. One-half is being pastured while the other half is growing up again.

FIRST WE TOLD OUR CUSTOMERS — NOW THEY ARE TELLING US

... how much more palatable, more productive per acre and more profitable they find our year around pasture and hay meadow, the **ALL SEASON PERMANENT PASTURE AND HAY MIXTURE**. We know it is good and we know it is the best value and that is why we recommend it to you without qualification as a real investment. Here are a few facts:

1. Once established, it does not have to be reseeded.
2. It is good insurance against pasture shortage due to seeding failures or winterkilling of certain crops intended for use as pasture.
3. These sod-forming grasses mixed with alfalfa will build soil, prevent erosion, stop bloat, and make the stands last.
4. **ABUNDANT GREEN FORAGE** is produced from early spring to late fall —ideal for dairy cattle.
5. It provides pasture in cold weather when other grasses are dormant.
6. It has two or three times the carrying capacity of ordinary pastures and when cut for hay, it produces two to three times the tonnage of more palatable and nutritious hay per acre than do the ordinary grasses.
7. It can be plowed up anytime or left indefinitely.
8. It resists dry weather and will choke out weeds.
9. It is ready to receive livestock from two to four weeks before other grasses may safely be used.
10. It starts sufficiently early to be ready in most years for use during the calving and lambing. It stimulates the flow of milk from cows and ewes which results in increased vigor and significantly higher weaning weights.

OUR MIXTURE HAS NOT A SINGLE KNOWN ADVERSE FEATURE

Plant our mixture at the rate of 12 to 15 pounds per acre, early in the spring, on a firm seed bed; stubble land is very good for this purpose.

25 lbs. \$7.00; 50 lbs. \$13.00; 100 lbs. \$25.50

STEERS VOTE OUR PASTURE THE BEST

From a Benton County, Iowa, farmer: "Your All Season Pasture and Hay Mixture made more money per acre for me, with less work, than my corn did. It made possible the cheapening of beef cattle by 50 per cent, and I got six times as much feed as ever before on the same piece of ground."

Smooth BROME GRASS—One of the Most Palatable of All Pasture Grasses

Smooth Brome Grass is a Giant Bluegrass—hardy and permanent and it roots deeply, sometimes 4 and 5 feet deep, making it stand dry and hot weather as well as the coldest winters.

It is the first green grass in the spring and the last in the fall and keeps green all summer when other grasses are dried.

All classes of livestock like it. Very palatable. As it is a grass, it cannot poison stock. It is important to seed it as early as the ground can be worked. Very little if any injury from frost.

Plant 15 to 20 pounds per acre, where it is seeded alone. Do not cover deeply— $\frac{1}{2}$ -inch deep is sufficient. No. 1 seed, free from foul weeds.

Smooth Brome Grass

10 lbs. \$2.40; 25 lbs. \$5.50; 50 lbs. \$10.00; 100 lbs. \$19.00

BROME AND ALFALFA

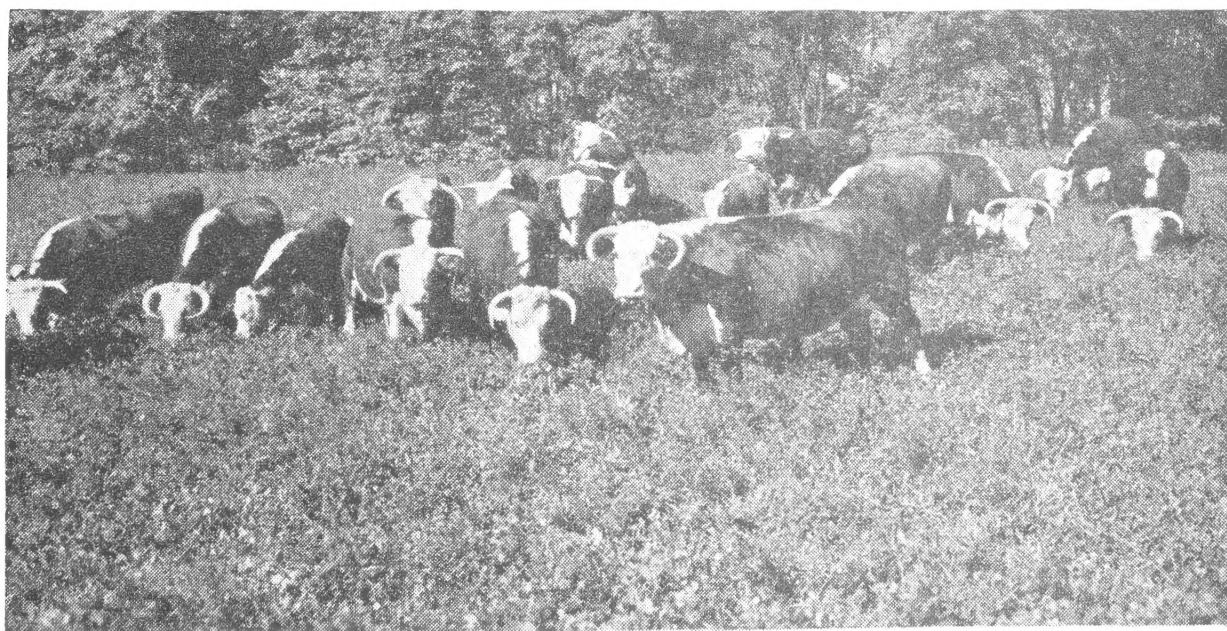

A Fifty-Fifty Mixture of Quality Seed

I sincerely hope large numbers of our customers will sow a mixture of our Brome Grass and Alfalfa this year. It makes very heavy crops of hay that cure quicker than straight Alfalfa and is equal to it in feeding value. Both are very drought resistant. They supplement each other in a remarkable way. Pasture test for an average of three years, an acre of Brome-Alfalfa produced 3,933 pounds of milk and had an average of 145 pasture days. Straight Alfalfa produced 3,606 pounds of milk and provided 124 pasture days. In another test the mixture pastured by sheep gained 362 pounds per acre. Straight Alfalfa 309 pounds.

All cleaned seed. Sow about 16 pounds of the mixture per acre.

\$18.00 for 50 lbs.; \$35.00 per 100 lbs., including bags

Not only does an Alfalfa-Bromus mixture produce more hay, but it is a much better soil gripping crop on rolling erodible land.

Herefords on Brome-Alfalfa Pasture

**PASTURE is your cheapest and most
PROFITABLE FEED**

CRESTED WHEATGRASS—The Miracle Grass Builds BEEF and MUTTON

A drought resistant, long lived perennial bunch grass, introduced by Professor Hansen of South Dakota State College, who found it in Siberia from where he also introduced Cossack Alfalfa. It is as perfect a balanced diet as can be found in one plant. Sometimes called the Miracle Grass because of its:

RESISTANCE TO SEVERE CLIMATIC CONDITIONS: Introduced from the plains of Siberia, it has stood the most severe droughts of the western plains and has withstood temperatures ranging from 50 degrees below zero to 120 degrees above during hot and dry summer months.

LONG GROWING SEASON: Becomes green two weeks earlier in the spring than other grasses and stays green later in the fall. Has grown four inches in November and December before below zero temperatures put it in a temporary dormant stage.

HEAVY PRODUCTIVITY: The Wyoming Experiment Station reports that its hay produces seven times as much meat per acre as is produced by native grass hay. Produces twice as much pasture and hay of high palatability as native grass. Tests as high as 35 per cent protein AND shows absolutely no effect from heavy grazing.

RECLAIMING VALUE: Because of its heavy root system and resistance to severe climate, it has reclaimed millions of acres of land apparently ruined by erosion. It reseeds itself and chokes out weeds, conserves moisture and at the same time provides a wonderful forage for livestock.

THE IMPROVED FORAGE TYPE Fairway Strain of Crested Wheatgrass is finer stemmed, possesses 10 per cent more leaf, produces more hay per acre, and is definitely superior to the Standard type. Plant it real early in the season when climate plus moisture conditions are ideal for its germination. The very best top quality seed of the heavier yielding Forage Type Strain:

10 lbs. \$2.60; 25 lbs. \$5.00; 50 lbs. \$9.50; 100 lbs. \$18.00

No. 1 grade Standard Crested Wheatgrass:

10 lbs. \$1.80; 25 lbs. \$4.25; 50 lbs. \$8.00; 100 lbs. \$15.00

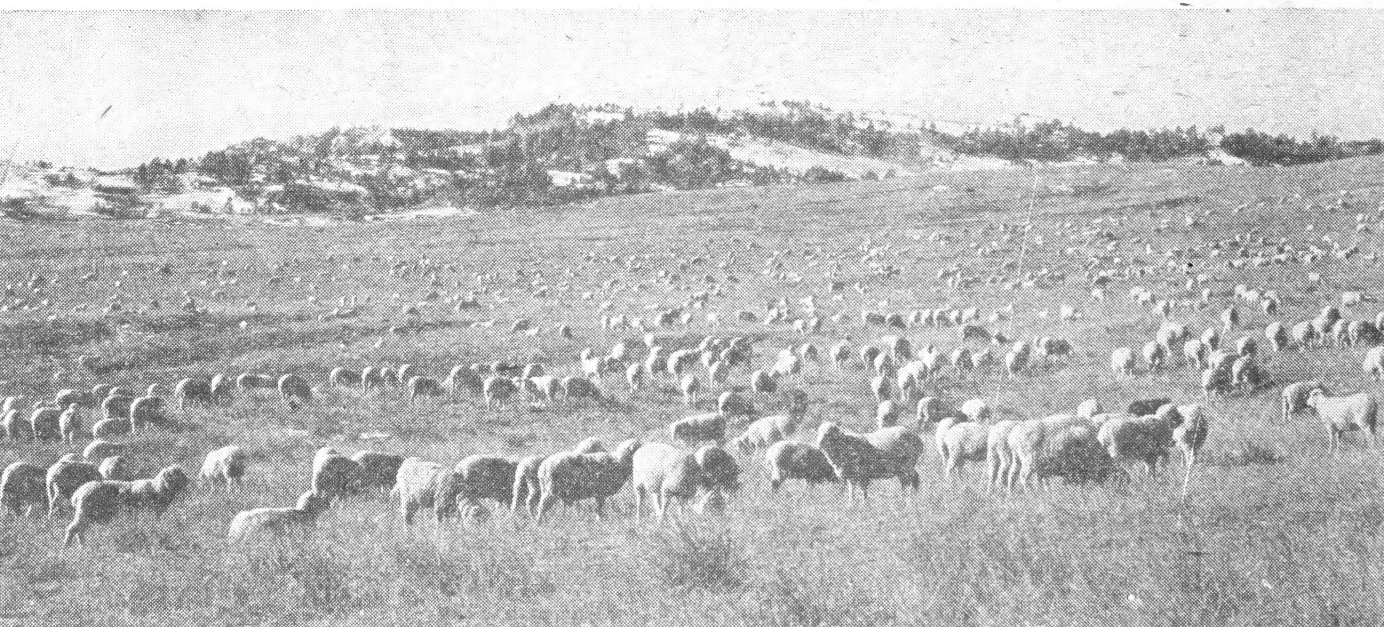

Photo by the Black Hills Studio

Wheatgrass is not only the most profitable for beef cattle but is also the best year round permanent pasture for production of wool and mutton on western ranches

CRESTED WHEATGRASS Builds Beef and Mutton

DRY LAND PERMANENT PASTURE MIXTURE

High altitude seed produced from the hardiest known strains, grown without irrigation. Well adapted to the intermountain region as well as lower country of the Western and Southwestern states. Composed of two parts Forage-type Crested Wheatgrass and one part of each Smooth Brome Grass, Domestic Ryegrass and Dwarf Yellow Sweet Clover.

25 lbs. \$5.00; 50 lbs. \$9.00; 100 lbs. \$17.50

GROW QUICK PASTURE MIXTURE 3.40 25 Lbs.

For Cattle, Sheep and Hogs

Our Grow-Quick Mixture is a big seller. The cost of seeding is low and it gives quick production. You can begin pasturing it lightly within relatively few weeks after sowing.

Contains equal parts of Sweet Clover, Domestic Ryegrass, Timothy, Rosen Rye.

Good quality seed is used and we mix it as thoroughly as we can so as to give you a fine value at low cost.

The Ryegrass and Rosen Rye in this combination are fast growers and afford the earliest feed. Meanwhile the Sweet Clover and Timothy are developing to increase its production and value. It keeps on growing until after frost. The Sweet Clover, Timothy and most of the Ryegrass of course live over winter and can be used the next year for plowing under, for continued pasture or cut for hay.

Sow 20 pounds per acre. Sow about the time you sow small grain. Do not use a nurse crop.

50 lbs. \$6.25; 100 lbs. \$12.50, including bags

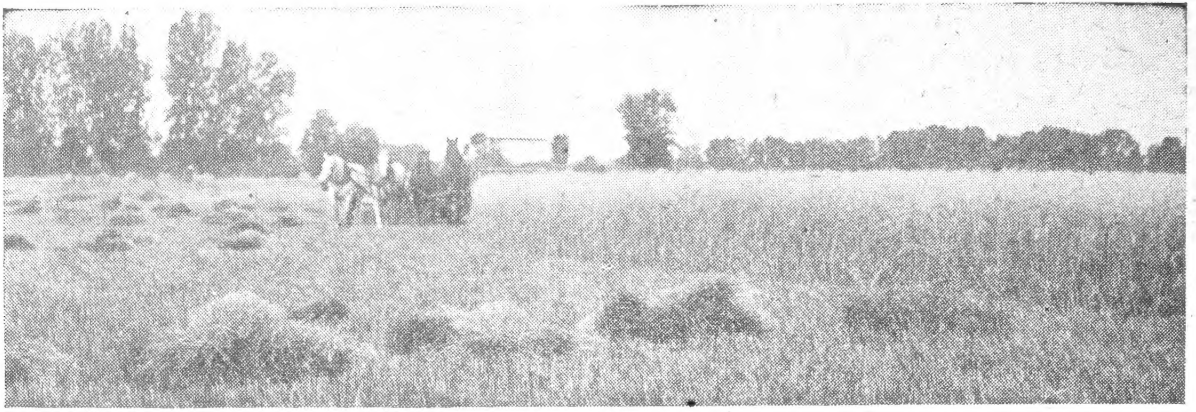

Lambs on Grow Quick pasture

PLANT HOPPER ESCAPING CROPS

You who have suffered damage and destruction of crops by grasshoppers—Plant early maturing BRUNKER Oats, Spartan Barley, which matures so early, that they may be harvested before serious damage takes place. There are no 100 per cent immune crops, but because of some physical character or chemical substance, grasshoppers seem to avoid PILOT No. 13 Spring Wheat, PROSO Millet, Cane and Milo, Gehu, Falconer and the high yielding semident Hybrid KF Corn. Order these from this catalog and order them early.

ORDER EARLY AND AVOID DELAYS AND DISAPPOINTMENTS

BRUNKER OATS Hits 110 Bushels Per Acre

Brunker Oats ripen ahead of hoppers, drought and July heat

A rapid growing, earliest-maturing and higher yielding variety of oats for dryland in western states. This variety is drought resistant and carries considerable smut resistance. In variety tests last few years it has outyielded all other early varieties of oats, especially on dryland in short season country.

10 bu. for \$12.00; 20 bu. at \$1.15 per bu., including bags

NEW HIGH YIELDING BOONE OATS

One of the latest introductions by the plant breeders of the Bureau of Plant Industry. Boone is an early, short, strong strawed, yellow oat, resistant to most known races of stem rust, to some races of leaf rust and to both smuts. In spite of hail and grasshopper damage it produced 60 bushels of heavy oats per acre. In 11 field trials Boone has averaged 13 per cent higher than the Gopher. In our own tests it yielded more than the Vieland. We highly recommend this variety for midwestern farms.

10 bu. for \$11.50; 20 bu. or more at \$1.10 per bu., including bags

WINTER OATS

Established a record of 117 bushels per acre. It must be seeded real early in the spring to give best results. We plant them as early in the spring as we do the Spring Wheat and they withstand more cold than most other varieties of oats. They contain about 10 per cent of barley, but our sheepmen and cattlemen do not mind that, because of their high yielding ability.

10 bu. for \$11.50; 20 bu. or more at \$1.10 per bu., including bags

Reselected WINTER OATS free from any barley:

10 bu. for \$12.50; 20 bu. or more at \$1.20 per bu., including bags

SPELTZ OR EMMER

One of the easiest grain crops to raise on dryland. Fine horse, hog, poultry and cow feed.

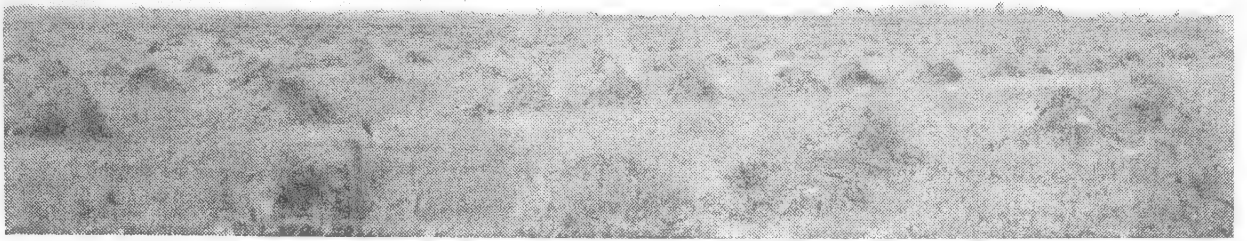

5 bu. for \$7.50; 10 bu. or more at \$1.45 per bu., including bags

For every 32 bushels of seed grain, order one pound of New Improved Ceresan to control smut, at 80 cents per pound can. Order Seed grain without delay, to be sure your order will be filled and to allow time for shipment.

LONG ROTATION COMBINATION FOR HAY AND PASTURE

Composed of equal parts of Hardy Alfalfa, Biennial Sweet Clover, Timothy and Smooth Brome Grass seed. For Southwestern, West Central and Central states. Plant at the rate of 12 to 16 pounds per acre, depending on moisture or rainfall in your section. After two years Brome Grass and Alfalfa will remain for heavy hay or pasture.

25 lbs. \$6.50; 50 lbs. \$12.50; 100 lbs. \$24.50, including bags

Pilot No. 13 Spring Wheat—48 bushels per acre

PILOT NO. 13 SPRING WHEAT

Harvest Is Good Despite Hoppers, Hail and Rust

A government plant breeder's selection from Pilot wheat and the consistent higher yielding variety for 5 years in succession at the Government Experiment Farm here. A year ago when we had rust, PILOT 13 yielded FIVE TIMES as much per acre as Marquis and TWICE as much as the ordinary Pilot wheat. It was not only more rust resistant than any other wheat, but it seemed also to be resistant to hail and grasshopper damage. Buy better yields per acre and insure against severe loss from rust, by ordering Pilot No. 13 Spring Wheat right now. Has straw strength. Does not shatter. Has milling quality.

\$2.60 per bu.; 10 bu. or more at \$2.50 per bu., including bags

MIDA—THE NEWEST AND LATEST

Rust Resistant Highest Yielding Spring Wheat.

This introduction from the North Dakota Agricultural College made a record of 51 bushels of wheat here on dryland and 61 bushels in North Dakota. It has length and strength of straw. Earlier maturity. Does not shatter. Can be combined or harvested with binder. Weighed 63 pounds per bushel and TEST 15.5 per cent PROTEIN. Has HIGH MILLING QUALITY. Resistant to Hessian Fly injury, rust and smut. It is the answer to the Spring Wheat growers dream.

5 bu. for \$13.75; 10 bu. for \$27.00; 20 bu. or more at \$2.65 per bu., including extra heavy seamless cotton bags

SPARTAN BARLEY EVADES DROUGHT

Ripens Ahead of Hoppers, Drought and July Heat

The highest yielding, earliest maturing variety. It is a two row, smooth bearded, easier to handle and equals corn in feeding value, weighing 56 pounds per bushel.

You can plant it early in March because it is cold resistant. Ripens before hot and dry winds in July injure other varieties. A customer writes, "This seed did not cost me anything. The extra yield above the barley I had been using more than paid for the seed."

It made a record here of 80 bushels per acre of the heaviest, most beautiful barley. The judges at the State Fair awarded it FIRST PRIZE.

500 lbs. \$15.50; 1,000 lbs. or more \$3.05 per 100 lbs., including bags

TREBI BARLEY

Canadian six row high yielding Trebi Barley for irrigated land or where moisture is plentiful. A consistent high yielder year after year.

5 bu. \$7.75; 10 bu. or more \$1.50 per bu., including bags

ORDER SEED GRAIN AT ONCE, to allow plenty of time for shipment by freight or truck and for early planting. Also order 1 pound of Improved CERESAN for every 32 bushels of seed grain to be planted on your farm.

**WITHOUT RESERVATION WE RECOMMEND
AND KNOW YOU WILL WANT TO ORDER**

SWEET SUDAN

Free choice of milk cows on Lubbock Experiment Station pasture, shows Sweet Sudan pastured off to the ground before the common Sudan planted alongside the Sweet is touched.

WHAT One of the newest and greatest triumphs of the plant breeder.

WHY Because 1) it has such a sweet juicy stalk of such high palatability that livestock eat it down to the ground before touching other grasses or legumes in the same pasture; 2) it does not seed as early as common sudan so stays green longer, and even after maturity its stalks and stems are readily eaten; 3) it has more and broader leaves, heavier and taller stalks, and heavier stools; 4) it is highly resistant to leaf spot disease, fire blight, chinch bug injury, root rot, charcoal rot, and to rust; 5) it is excellent for hay—bundled, loose or baled—which because of the sugar content does not easily dry out.

WHERE At Bober's Seed House, because we handle only the pure, top quality seed.

WHEN Now. Because it is a new introduction, the supply is not very large and the demand is great . . . with good reason.

25 lbs. \$4.50; 50 lbs. \$8.35; 100 lbs. \$16.00

The perfect summer pasture and annual hay plant, whether you live in Eastern States, North, South or in the West. Grows rapidly and thrives in the hot dry months when other pastures are least productive.

Sudan grass is planted at 4 to 20 pounds per acre depending on rainfall.

Standard SUDAN GRASS seed, No. 1 grade.

25 lbs. \$3.00; 50 lbs. \$5.50; 100 lbs. \$10.00

Whether you live East, West, North or South, try this on Sam's recommendation. Plant GEHU Flint, Payne's White Dent or Falconer Semi-dent corn. High yielding ability and highest fattening quality, best adapted for hogging and sheeping off. Save work and make a higher profit on your livestock. Seed corn is not plentiful, order without delay.

Price \$5.65 per bushel

South Dakota Agri. Experiment Station Photo

RANCHER SORGHUM

A new introduction released for the first time this spring by the South Dakota Experiment Station, will save stockmen thousands of dollars by preventing losses from acid poisoning and give us a dependable safe forage. RANCHER Sorghum is a hybrid developed by crossing and recrossing Low Acid selections from Dakota Black Amber.

It has a sweet leafy stalk plant with the lowest hydrocyanic acid content of any named forage sorghum variety in production; it contains only one-third the acid of the Low Acid Cane and only one-tenth of the dangerous acid content of commercial varieties of cane. It looks to us as if this will make Rancher Sorghum as safe to pasture as Bluegrass.

It has produced six and one-half tons of forage and 2,260 pounds of grain per acre, 25 per cent more than the Amber Cane alongside it.

10 lbs. \$1.75; 25 lbs. \$4.00; 50 lbs. \$7.80; 100 lbs. \$15.00

LOW-ACID CANE

A South Dakota State College introduction which yields more than ordinary cane and has only one-fourth the acid of other commercial varieties. Experiment Stations show that this sorghum produces more forage and feed units per acre regardless of moisture supply. Used for silage in mixture with corn or by itself by many farmers east and west. This is No. 1 Certified seed.

10 lbs. \$1.20; 50 lbs. \$4.50; 100 lbs. \$8.65

WHEATLAND BLEND—Hybrid Seed Corn

A practical blend of 80-day flint and 85 and 90-day yellow dents in the round, or as some refer to it, thick flat kernels. There is an advantage in having a variance of maturities where unfavorable weather conditions might hit the corn at a critical period of its growth. A planter plate recommendation tag will be sewed in each bag of Wheatland Hybrid seed corn.

Price \$6.00 per bushel

BOBER'S SEED CORN

For BIGGER YIELDS on Western Lands

Gehu Flint—70-day corn—unexcelled for hogging and sheeping off, drought, frost and hail resistant. Its feeding qualities the highest of any corn.

Falconer—75-day semident—this and Payne's White Dent, are the best yielding of early maturing, open pollinated corn.

Payne's White Dent—80-day corn—record yield of 91 bushels per acre, a consistent good yielder. Also used for hogging off.

Early Minnesota No. 13 Yellow Dent.

Early Northwest Dent (red and white cap)—Leafy, 85-90-day corn.

Rainbow Flint—Highest yield for silage corn.

Price for above seed corn including bags:

½ bu. \$3.00; 1 bu. \$5.65; 5 bu. \$27.50

New! K. F. THE EARLIEST MATURING HYBRID

Recommended for the 80-day areas of the Dakotas, Minnesota, Montana, Michigan, New York, Utah, Wyoming, etc.

This new Kingscrost KF Hybrid represents 15 years of research to develop a superior corn to replace Falconer and flint varieties. Its rapid spring growth at low temperature, adaptation to short seasons and leafiness are from the flint parent. Non-suckering, tall plants, high ears, and stalk strength to insure fall standability, are contributed by the dent parents. Easy to pick by hand and ideal for mechanical picking plus **INCREASED YIELD** makes this the greatest achievement in several years.

½ bu. \$5.50; 1 bu. \$10.50; 5 bu. \$51.50

HYBRID CORN THAT YIELDS MORE

For the West and Southwest

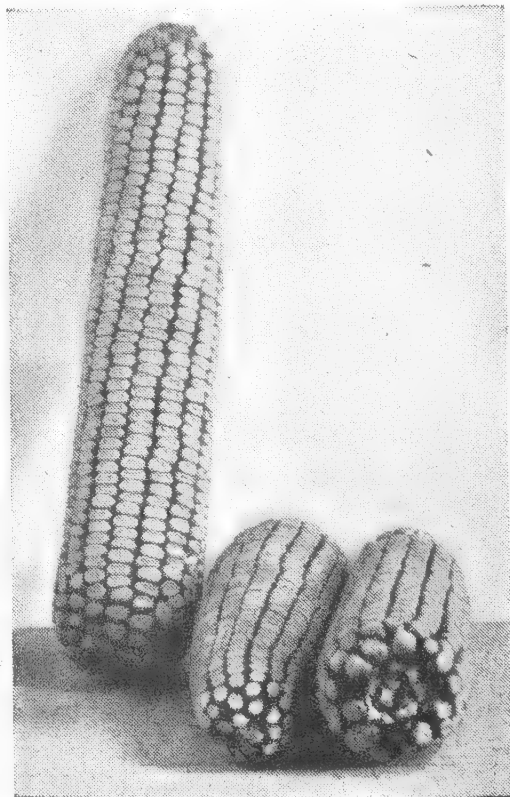

Yields 20 to 50 per cent more per acre than any other corn we have tried. It is the hardest and most drought-resistant of all Certified Hybrids, with the widest adaptability. Produces good corn under adverse conditions. Every kernel is carefully graded to run through your planter uniformly.

90 to 100-day Hybrid. Large plants, high ears and a stalk that stands up, winner of the Silver Trophy for highest yield per acre. Just cob enough to hold the kernels together. Survives cold springs and ripens before earliest frosts. What better recommendation?

½ bu. \$5.00; 1 bu. \$9.50; 5 bu. \$46.75

100 to 110-day Hybrid. This cold and drought resistant yielder of bumper crops of better feeding corn has done the best for our customers in the west and in the southwest. It has large leafy plants, dependable earliness and deep kerneled soft starch ears. It is a little later maturing than our earliest maturing.

½ bu. \$4.50; 1 bu. \$8.50; 5 bu. \$41.75

Hybrid Corn

**DON'T GET CAUGHT SHORT
ORDER ALL SEED EARLY THIS YEAR**

GOOD SEED CORN WILL BE SCARCE LATER ON

PROF. HANSEN'S PROSO GRAIN AND HAY MILLET

We'd like to see you try Prof. Hansen's Proso Grain Millet in your ration. This high protein feed is necessary for heavy production. It will keep your chickens healthy and will produce many more eggs. The Latin name (*Panicum Mitiaceum*) indicates that it may yield a thousand fold.

A field of Proso that yielded 75 bushels of grain per acre

A Grain Crop in Sixty Days

This Russian introduction yields fifty to eighty bushels per acre. It takes only sixty or seventy days to mature a grain crop. This is one of the most versatile crops in the country and can be grown everywhere, on dry land and on irrigated land, low land or upland. It can be used for hay or mature for grain. It makes a wonderful chicken feed and it is also used for fattening turkeys and livestock. We counted 1,500 kernels on one plant of Proso.

On dry land plant twenty pounds per acre, any time from May 1st to August 1st. In sections with better rainfall plant it at the rate of 30 pounds per acre with a grain drill. Harvest the same as you do grain.

Look for Two Eggs from Every Pound of Feed.

10 lbs. 80c; 25 lbs. \$1.30; 50 lbs. \$2.50; 100 lbs. \$4.25; 500 lbs. \$20.50

Mighty High in Goodness—Mighty Low in Price

HAY MILLETS

KURSK SIBERIAN—A very fine variety of millet, extremely hardy and withstands drought. The plant shows a remarkable stooling habit, as many as 30 to 40 stalks frequently grown from one seed. Produces the most hay from least amount of rainfall.

Prices: 50 lbs. \$2.75; 100 lbs. \$5.25; 300 lbs. \$15.50

WHITE WONDER AND GERMAN MILLET

A wonderful producer of hay and exceedingly valuable as a food for cattle and sheep. Like other millets it has a very low water requirement and is an excellent dry land crop. Produces 4 or 5 tons of hay per acre.

Prices: 50 lbs. \$2.75; 100 lbs. \$5.25; 300 lbs. \$15.50

RAISE BEANS FOR A CASH CROP

Improved GREAT NORTHERN BEANS—Yield 30 to 50 bushels per acre. Larger than the common Navy bean and more palatable. Always a cash market for these.

10 lbs. \$1.40; 50 lbs. \$5.30; 100 lbs. \$10.00

Improved PINTO BEANS—Leading commercial bean of the west. They produce good on dry as well as on irrigated land. Same size as the Great Northern.

10 lbs. \$1.40; 50 lbs. \$5.30; 100 lbs. \$10.00

New Improved TEPARY WHITE BEAN—Yields 50 per cent more beans per acre than other types. Resembles the little navy bean but smaller in size. Some of our Iowa farmer friends use it for hay crops of high protein content because it is also bushy and so leafy.

10 lbs. \$1.60; 25 lbs. \$3.75; 50 lbs. \$7.00; 100 lbs. \$13.75

BOBER'S NORTHERN VEGETABLE SEEDS

Are Famous for Their Early Maturity and Yielding Ability

FREE With each \$5.00 worth of garden seed ordered on or before February 15th we will enclose a garden size package of GO-WEST Insect Bait. Lures and kills CUT-WORMS, Slugs, GRASSHOPPERS, Crickets, Vegetable Weevils and other leaf eating insects.

WHITE RICE—Large and tender.

SWEET CORN

1 lb. 30c; 5 lbs. \$1.30; 10 lbs. \$2.50

GOLDEN SUNSHINE—Extra early.

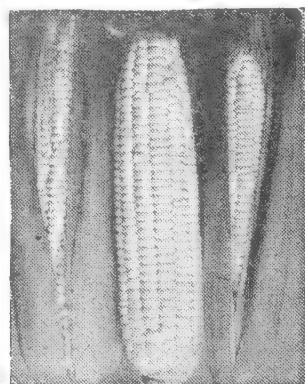

GOLDEN BANTAM—Early season.

STOWELL'S EVERGREEN—Late variety.

TENDERGOLD HYBRID SWEET CORN

1/2 lb. 30c; 1 lb. 50c; 3 lbs. \$1.45

Early maturing, sweeter and bigger yielder.

Imp. Golden Bantam

A REAL CASH CROP

Here is a harvest picture of Sweet Spanish Onions taken by the Black Hills Studio, in Spearfish Valley, of a field that made 1,600 bushel baskets per acre. Who can top this? We have similar reports from customers in Michigan, Nevada and Colorado. Mr. James Muroya of Kersey, Colorado, who specializes with our Utah strain Sweet Spanish Onions came near making same record of production.

The Utah Strain of SWEET SPANISH Onion seed produces the best onions for home use and the most profitable crops for market.

HARDY PEARS

✓ **MENDEL PEAR**—Grown without winter protection. A Minnesota product, medium size, sweet and juicy, golden yellow color.

✓ **TAIT PEAR**—Originated in Canada. Perfectly hardy, a good fruiter and of fine quality. Price, your choice of varieties, 3-4 ft., \$1.35 each; 3 trees, \$3.85.

PROF. HANSEN'S MOST FAMOUS PLUMS

For Quickest Return in Fruit

- ✓ **WANETA PLUM**—The giant of hardy plums. Up to two inches in diameter. Highly flavored. Richly colored red skin.
- ✓ **TECUMSEH**—The most consistent yielder of quality plums. Best record in drought years.
- ✓ **OPATA CHERRY-PLUM**—Earliest of all plums. The flesh is a light green color with a purplish red skin. Very productive.
- ✓ **SAPA CHERRY-PLUM**—Early, large, productive and hardy; Black purplish flesh is extra fine for eating and wonderful for preserves and jam.
- ✓ **HANSKA PLUM**—The superb plum of apricot flavor and fragrance. Very hardy and productive. Highly colored and firm flesh.
- ✓ **EARLY RICHMOND**—The earliest of the sour pie cherries. Fruit dark red, medium in size. Tree vigorous and bears young. Does best on upland or sandy soil which is well drained.

✓ **OKA CHERRY**—Not really a cherry but is a good substitute for a cherry. It is a sand cherry hybrid, a seedling of Champa. Color brighter than Sapa and a black red flesh.

ADAPTED EARLY MATURING APPLES

- ✓ **PROF. HANSEN'S ANOKA APPLE**—The wonder Apple; as it usually bears the second year after planting. Very hardy everywhere. Good eating and a heavy producer.
- ✓ **WEALTHY APPLE**—The most popular of all early fall apples. Large, bright red, very sweet and fine.
- ✓ **YELLOW TRANSPARENT**—Early variety, ripening to a yellow in August. Good eating, being tender and juicy when ripe.
- ✓ **DUCHESS**—Old standard hardy summer variety. Large apple streaked with red. Ripens the first of September.
- ✓ **RED BIRD or CRIMSON BEAUTY**—Early apple of bright red color and very attractive. Good quality and flavor. Originated in Canada.
- ✓ **MCINTOSH RED**—Fruit medium to small in size, beautiful crimson. High quality for marketing and home use. Keeps until mid-winter or later.
- ✓ **DOLGO CRAB**—Originated at South Dakota Experiment Station. Tree hardy, vigorous, upright grower. Fruit medium to small, rich in flavor, bright red color. Fine for pickling or jelly.
- ✓ **WHITNEY CRAB**—August to September. The fruit is very large and glossy green, striped with red. The flesh is firm, juicy and pleasant. It is a very heavy yielder and highly prized for cider. Nearly the size of an apple.

GUARANTEE ON NURSERY STOCK

We guarantee our stock to be strictly first quality and in healthy dormant condition at the time of delivery. Any stock that does not come up to this guarantee will be replaced without charge upon immediate notification thereof. No adjustments after June 15th.

PORK FROM PASTURE

Permanent Hog Pasture Mixture contains the following mixed in the right proportion to produce the greatest feeding value:

Alfalfa.

Red Clover.

Alsike Clover.

White Dutch Clover.

Domestic Rye Grass.

Timothy.

This mixture can be sown any time, from early spring until midsummer, and does not require any particular kind of soil, in fact, any soil that produces crops of small grain or corn, will answer the purpose. Because of the large amount of legume it contains, it serves the double purpose of providing the hogs with pasture of high feeding value, and building up the soil at the same time. Sow 15 to 20 pounds per acre.

25 lbs. \$7.00; 50 lbs. \$13.50; 100 lbs. \$26.00

PASTURE is your cheapest and most PROFITABLE FEED

Y., and Warm Springs, Ga.

DEPENDABLE

Where the Season Is Short

Frank McGuigan who lives in the higher altitude in the northern Black Hills says. "I never missed a corn crop since I started using your Payne's White Dent 80-day corn, 15 years ago on my dryland. It can't be beat for early maturity and yielding ability among open pollinated dent corn."

And even in longer season country where you wish to finish off pigs and lambs for early market, better let Payne's White Dent corn help you.

1 bu. \$5.65; 5 bushels \$27.50

Packet of Semesan Jr. to treat 1 bushel seed corn 20c.

NEW NAKOTA HULL-LESS OATS

Released by the South Dakota State College

Nakota is entirely hull-less, threshes easily, does not shatter, is medium early. It is both smut and rust resistant and produces well over 60 bushels per acre. A bushel weighing 43 to 45 pounds. The high protein content, minus the objectionable hulls, makes it a perfect feed for promoting growth in humans, in poultry and in young animals. **SEED IS LIMITED.** Order without delay.

50 lb. \$3.50; 100 lb. \$6.00

CYCLONE GRASS AND CLOVER SEEDERS

←CYCLONE. Most popular seeder for sowing grasses, clover, etc. Easy to use. Perfect distributor. Easily adjusted.

\$3.00 Postpaid

We are sorry to report another very short Alfalfa Seed Crop because of an unfavorable season and severe damage from grasshoppers.

We urge our friends and customers to order at once. Hardy Alfalfa seed will be very scarce later on. Allow us to substitute if the strain you order is sold out.

TO IMPROVE YOUR PASTURE AND SOIL

LADINO CLOVER—A drought resistant, leafy succulent perennial, a giant form of White Clover, has a tendency to remain close to the ground. It is a very useful legume addition to your present pasture on some of the soils which are not suitable for alfalfa. A pound of seed per acre in mixture with your other grasses will be a very good investment on your farm.

\$2.25 per lb.; 5 lbs. for \$10.00 prepaid

New MONTANA PERENNIAL CLOVER Thrives on Alkali Soils

This plant which looks like a cross between sweet clover and alfalfa was discovered growing in low moist alkali soil in Montana, is cut, cured and stacked like alfalfa. There are many farms in the west with alkali spots not capable of producing any kind of plant growth and this new perennial Clover will immediately make such worthless land profitable. Plant 5 to 7 pounds per acre late in February or in March. Shallow planting on firm ground is best.

1 lb. \$1.00; 5 lbs. \$4.50, prepaid. Not prepaid, 10 lbs. \$7.50; 25 lbs. \$17.50

STRAWBERRY CLOVER—A perennial low-growing plant makes an excellent pasture on alkali land that does not tolerate other plants. Used successfully in irrigation districts to make useless land profitable. Plant 2 pounds per acre.

\$2.25 pound; five pounds prepaid for \$10.00

NEWELL, SOUTH DAKOTA

Lay the foundation for prosperity for years to come by planting more ALFALFA and PASTURE GRASSES. The Year Around PERMANENT PASTURE and Hay Meadow described on page 6, is the most productive, most palatable and most profitable. It is one of the most profit paying investments on your farm.

25 lbs. \$7.00; 50 lbs. \$13.00; 100 lbs. \$25.50

NEW MARTIN'S COMBINE MILO

Because it yields more bushels than other Milo varieties in grain per acre, equal to corn in feeding value, and will produce a crop in drought years when grain crop is a failure, and because it is harvested readily by combine, this new introduction will be in strong demand as long as the labor shortage lasts. For Western and Southwestern states we advise—Plant the **Limit of this Combine Milo** for grain which the United States and the World needs. Only 6 to 8 pounds per acre.

10 lbs. \$1.00; 25 lbs. \$2.00; 50 lbs. \$3.50; 100 lbs. \$6.00; 500 lbs. \$29.50

Field of Cossack Alfalfa

IT WORKS WHILE OTHERS SLEEP

Cossack shows the greatest vigor of spring growth of all varieties. It also has a quicker start of new growth after a cutting for a second and third crop while other strains lie dormant awhile.

CROP INSURANCE

Judge wisely, it is better to be safe than sorry. While Cossack alfalfa seed costs slightly more per pound, a little less seed is required per acre to produce a full stand, because of its larger, bushier and leafier plants.

NO FOUL WEEDS

You not only get the hardiest and best yielding ability in our Cossack alfalfa, but you are also safe from noxious weeds such as Quack Grass, Canada Thistle and other troublesome pests. Our seed is free from all foul weeds and complies with your state laws as well as with the Federal Seed Act.

SURVIVAL VALUE

In Cossack alfalfa you have a double value crop. It not only yields the most alfalfa hay per acre but it withstands the worst below zero freezing as well as the hottest and driest summers and it stands pasturing without material injury.

\$52.50 per 100 lbs., including bags and inoculation

LADAK AND COSSACK ALFALFA MIXED

For sections of country where wilt disease bothers alfalfa we recommend this mixture composed of half Ladak and half Cossack alfalfa for resistance to disease and at the same time high yielding ability of hardy alfalfa. 99.3 per cent purity, 90 per cent or more live seed. Fancy quality.

**30 lbs. \$16.55; 60 lbs. \$32.80; 100 lbs. \$54.50, including inoculation
FROM AN ALFALFA CUSTOMER**

Dear Mr. Bober:

I am glad to state that the alfalfa seed we obtained from you has made the finest growth of alfalfa that I have ever seen. I have been growing this crop for a good many years, but I am frank to say that we have never obtained the results with any alfalfa equivalent to that obtained from your seed. This is the reason we are using the seed again this year on an increasing number of properties, including one farm in Mississippi.

Very truly yours,

D. Howard Doane.

Ed Morgan, Fallon, Nev., in a newly planted field of Ladak and Cossack alfalfa, which is real productive and disease resistant.

BOBER'S 30-DAY RICHGREEN LAWN GRASS

**For a Beautiful Lawn
All Season**

Order Bober's "30-Day Lawn Grass" early and sow it as soon as the snow melts away in early spring. Sow one pound to 250 square feet and you will have a well established lawn by early summer. This mixture consists of fine leaved and deep rooted perennial grass and some White Dutch Clover, which assures a beautiful rich green lawn thick and free from weeds.

1 lb. 55c; 3 lbs. \$1.50; 5 lbs. \$2.40; 10 lbs. \$4.40, postpaid.

BUFFALO GRASS

Makes Wonderful Lawns in Dry Climate Regions

In the lighter sandier soils, and the dry and semi-dry regions Buffalo Grass has proven highly desirable for lawn use. It is a low growing plant, seldom getting over 6 inches in height; hence needs no cutting and requires very little care. Our seed is treated and scarified to make it grow quicker. Since it is spread from underground root stocks, as well as from seed, once you get a thin stand established, it thickens up all by itself.

0Z'1\$ '91 2/1 :059 '91 1/1

One pound covers 3,000 square feet. \$2.00, Postpaid

FAIRWAY STRAIN OF CANADIAN CRESTED WHEATGRASS

A very hardy, leafy grass easy to start if planted real early in the spring because it germinates better in cool, moist weather. Plant at the rate of one pound to 300 square feet. Very good for dry regions.

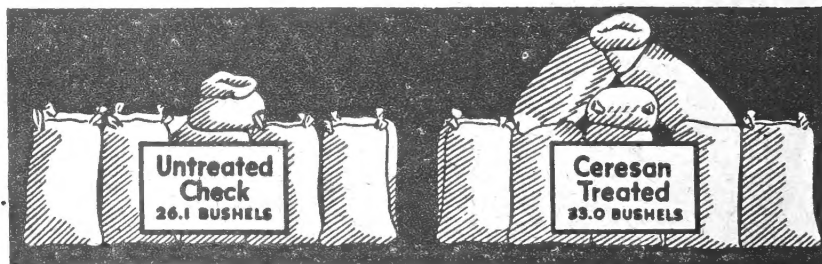

1 lb. 40c; 5 lbs. \$1.75, Postpaid
